

## Post-Operative Instructions for Crown Delivery

- After receiving your crown, please wait 24 hours before chewing on that side. Soft foods for 24 hours are recommended.
- If you have received an implant crown, the crown is cemented using a strong temporary cement. In most cases, the crown will remain cemented. If the crown becomes loose, please contact the office (781-862-3333).
- Do not floss your crown in the first 24 hours.
- Floss threaders are required for bridges. Floss threaders help to maintain the health of the tissue under your bridge. Your dental assistant can demonstrate how to use them.
- Maintain proper hygiene, brushing and flossing the crown daily.
